The listing of claims will replace all prior versions, and listings, of claims in the application:

LISTING OF CLAIMS

Claim 1 (currently amended): A magnetic pole piece for a magnetic resonance imaging ("MRI") system, said pole piece comprising a stack of a plurality of sheets of an alloy that comprises iron and aluminum, said sheets being laminated together, wherein said alloy comprises an aluminum content from about 8 weight percent to about 17 weight percent.

Claim 2 (cancelled)

Claim 3 (withdrawn): The magnetic pole piece for a MRI system according to claim 2, wherein said alloy further comprises cobalt in an amount from about 0.1 weight percent to about 10 weight percent.

Claim 4 (withdrawn): The magnetic pole piece for a MRI system according to claim 2, wherein said alloy further comprises nickel in an amount from about 0.1 weight percent to about 10 weight percent.

Claim 5 (withdrawn): The magnetic pole piece for a MRI system according to claim 2, wherein said alloy further comprises silicon in an amount from about 0.1 weight percent to about 4 weight percent.

Claim 6 (withdrawn): The magnetic pole piece for a MRI system according to claim 3, wherein said alloy further comprises silicon in an amount from about 0.1 weight percent to about 4 weight percent.

Claim 7 (withdrawn): The magnetic pole piece for a MRI system according to claim 4, wherein said alloy further comprises silicon in an amount from about 0.1 weight percent to about 4 weight percent.

S.N. 10/064,587

RD-28041-1

Claim 8 (original): The magnetic pole piece for a MRI system according to claim 1, wherein each of said sheets has a thickness less than about 0.5 mm.

Claim 9 (original): The magnetic pole piece for a MRI system according to claim 1, wherein each of said sheets has a thickness less than about 0.3 mm.

Claim 10 (original): The magnetic pole piece for a MRI system according to claim 1, wherein each of said sheets has a thickness less than about 0.1 mm.

Claim 11 (original): The magnetic pole piece for a MRI system according to claim 1, wherein said sheets are separated from each other by an electrically insulating material.

Claim 12 (previously presented): The magnetic pole piece for a MRI system according to claim 11, wherein said electrically insulating material is selected from the group consisting of inorganic and organic electrically insulating materials.

Claim 13 (withdrawn): The magnetic pole piece for a MRI system according to claim 11, wherein said electrically insulating material is a silicate.

Claim 14 (previously presented): The magnetic pole piece for a MRI system according to claim 11, wherein said electrically insulating material is an organic polymeric material selected from the group consisting of epoxy resins, acrylic resins, polyorganosilanes, polyorganosiloxanes, polysilazanes, silicon polymers that have -Si-N- bonds, and mixtures thereof.

Claim 15 (withdrawn): The magnetic pole piece for a MRI system according to claim 11, wherein said electrically insulating material is a residue resulting from a heat treatment of a polymer selected from the group consisting of polyorganosilanes, polyorganosiloxanes, polysilazanes, silicon polymers that have -Si-N- bonds, and mixtures thereof.

Claim 16 (original): The magnetic pole piece for a MRI system according to claim 1, wherein said sheets have a resistivity greater than about 60 micro-ohm.cm, as measured according to ASTM standard A712-97.

S.N. 10/064,587**RD-28041-1**

Claim 17 (original): The magnetic pole piece for a MRI system according to claim 1, wherein said sheets are laminated at a pressure up to about 100 MPa.

Claim 18 (original): The magnetic pole piece for a MRI system according to claim 1, wherein said sheets are laminated with an organic binder at a melting temperature thereof.

Claim 19 (original): The magnetic pole piece for a MRI system according to claim 18, wherein said sheets have been annealed before being laminated together.

Claim 20 (original): The magnetic pole piece for a MRI system according to claim 1, wherein said stack is annealed at a temperature from about 900 °C to about 1300 °C.

Claim 21 (original): The magnetic pole piece for a MRI system according to claim 1, wherein said stack is annealed at a temperature from about 1000 °C to about 1200 °C in an environment selected from the group consisting of vacuum, reducing gas atmosphere, inert gas atmosphere, and combinations thereof.

Claim 22 (currently amended): A magnetic pole piece for a MRI system, said pole piece comprising a plurality of stacks, each of said stack comprising a plurality of sheets of an alloy that comprises iron and aluminum, said sheets being laminated together, said stacks being disposed adjacent one another such that sheets of one stack are oriented at an angle relative to sheets of an adjacent stack, wherein said alloy comprises an aluminum content from about 8 weight percent to about 17 weight percent.

Claim 23 (currently amended): A magnetic pole piece for a MRI system, said pole piece comprising a stack of a plurality of sheets of an alloy that comprises iron and aluminum, said sheets being laminated together, wherein said alloy comprises an aluminum content from about 8 weight percent to about 17 weight percent, each of said sheet being formed in a process comprising:

forging a block of said alloy at a temperature in a range from about 1000 °C to about 1300 °C to produce a forged alloy;

hot rolling said forged alloy at a temperature of about 1300 °C to produce a hot-rolled body; and

S.N. 10/064,587

RD-28041-1

cold rolling said hot-rolled body using a thickness reduction increment from about 10 percent to about 50 percent to produce said sheet.

Claim 24 (original): The magnetic pole piece for a MRI system according to claim 23 further comprising performing a first annealing of said hot-rolled body at a temperature from about 900 °C to about 1050 °C before said cold rolling.

Claim 25 (original): The magnetic pole piece for a MRI system according to claim 24, wherein said annealing is carried out for a time between about one hour and about 24 hours.

Claim 26 (original): The magnetic pole piece for a MRI system according to claim 23 further comprising performing a second annealing of said sheet after said cold rolling, said annealing being carried out in an environment selected from the group consisting of vacuum, reducing gas, inert gas, and combinations thereof.

Claim 27 (original): The magnetic pole piece for a MRI system according to claim 26 further comprising performing a second cold rolling after said second annealing.

Claim 28 (currently amended) :A MRI system comprising at least a magnetic pole piece that comprises a stack of a plurality of sheets of an alloy that comprises iron and aluminum, said sheets being laminated together, wherein said alloy comprises an aluminum content from about 8 weight percent to about 17 weight percent.

Claims 29-30: (cancelled)

Claim 31 (original): The MRI system according to claim 28, wherein each of said sheets has a thickness less than about 0.5 mm.

Claim 32 (withdrawn): The MRI system according to claim 29, wherein said alloy further comprises cobalt in an amount from about 0.1 weight percent to about 10 weight percent.

Claim 33 (withdrawn): The MRI system according to claim 29, wherein said alloy further comprises nickel in an amount from about 0.1 weight percent to about 10 weight percent.

Claim 34 (withdrawn): The MRI system according to claim 29, wherein said alloy further comprises silicon in an amount from about 0.1 weight percent to about 4 weight percent.

S.N. 10/064,587

RD-28041-1

Claim 35 (withdrawn): The MRI system according to claim 32, wherein said alloy further comprises silicon in an amount from about 0.1 weight percent to about 4 weight percent.

Claim 36 (withdrawn): The MRI system according to claim 33, wherein said alloy further comprises silicon in an amount from about 0.1 weight percent to about 4 weight percent.

Claim 37 (original): The MRI system according to claim 28, wherein each of said sheets has a thickness less than about 0.5 mm.

Claim 38 (original): The MRI system according to claim 28, wherein each of said sheets has a thickness less than about 0.3 mm.

Claim 39 (original): The MRI system according to claim 28, wherein each of said sheets has a thickness less than about 0.1 mm.

Claim 40 (original): The MRI system according to claim 28, wherein said sheets are separated from each other by an electrically insulating material.

Claim 41 (original): The MRI system according to claim 40, wherein said electrically insulating material is selected from the group consisting of inorganic and organic electrically insulating materials.

Claim 42 (withdrawn): The MRI system according to claim 40, wherein said electrically insulating material is a silicate.

Claim 43 (original): The MRI system according to claim 40, wherein said electrically insulating material is an organic polymeric material selected from the group consisting of epoxy resins, acrylic resins, polyorganosilanes, polyorganosiloxanes, polysilazanes, silicon polymers that have -Si-N- bonds, and mixtures thereof.

Claim 44 (withdrawn): The MRI system according to claim 40, wherein said electrically insulating material is a residue resulting from a heat treatment of a polymer selected from the group consisting of polyorganosilanes, polyorganosiloxanes, polysilazanes, silicon polymers that have -Si-N- bonds, and mixtures thereof.

S.N. 10/064,587

RD-28041-1

Claim 45 (original): The MRI system according to claim 28, wherein said sheets have a resistivity greater than about 60 micro-ohm.cm, as measured according to ASTM standard A712-97.

Claim 46 (original): The MRI system according to claim 28, wherein said sheets are laminated at a pressure up to about 100 MPa.

Claim 47 (original): The MRI system according to claim 28, wherein said sheets are laminated with an organic binder at a melting temperature of said organic binder.

Claim 48 (original): The MRI system according to claim 28, wherein said stack is annealed at a temperature from about 900 °C to about 1300 °C.

Claim 49 (original): The MRI system according to claim 28, wherein said stack is annealed at a temperature from about 1000 °C to about 1200 °C.

Claim 50 (original): The MRI system according to claim 28, wherein said stack is annealed in an environment selected from the group consisting of vacuum, reducing gas, inert gas, and combinations thereof.

Claim 51 (withdrawn): A process for making sheets of a magnetic alloy comprising iron and aluminum, said process comprising:

 forging a block of said alloy at a temperature in a range from about 1000 °C to about 1300 °C to produce a forged alloy;

 hot rolling said forged alloy at a temperature of about 1300 °C to produce a hot-rolled body; and

 cold rolling said hot-rolled body using a thickness reduction increment from about 10 percent to about 50 percent to produce said sheet.

Claim 52 (withdrawn): The process for making sheets of a magnetic alloy comprising iron and aluminum according to claim 51 further comprising performing a first annealing of said hot-rolled body at a temperature from about 900 °C to about 1050 °C before said cold rolling.

S.N. 10/064,587

RD-28041-1

Claim 53 (withdrawn): The process for making sheets of a magnetic alloy comprising iron and aluminum according to claim 52, wherein said annealing is carried out for about one hour.

Claim 54 (withdrawn): The process for making sheets of a magnetic alloy comprising iron and aluminum according to claim 52 further comprising performing a second annealing of said sheet after said cold rolling.

Claim 55 (withdrawn): The process for making sheets of a magnetic alloy comprising iron and aluminum according to claim 54 further comprising performing a second cold rolling after said second annealing.
